

Aluminium Spreader Plates (Double Groove)

UNDER FLOOR HEATING

The Product

Ensures even and speedy distribution of heat from underfloor heating pipes and the correct positioning of the pipes during installation.

Product Specification

- Simply fit to joists or battens and easily install underfloor heating pipe into the grooved channels of the Spreader Plate

Advantages

- Spreader Plates are a standard size for laying to 400mm joist centres, over suitable insulation
- Correct installation of underfloor heating pipes is guaranteed by simply positioning the pipe in the 16mm half round pipe channel groove which runs the length of the spreader plate

Technical Data

- Boxed in quantities of 40 plates for ease of storage, helping minimise damage from collision or contact with other objects in the workplace or storage space
- Aluminium Spreader Plates can be supplied in any quantity to satisfy the demands of any project
- Dimensions can vary depending on specification
