

Overlay Panels

UNDER FLOOR HEATING

The Product

Overlay panels for underfloor heating are low profile. The panels are ideal for renovation and new build projects.

Advantages

- Suitable for a variety of applications
- Low profile
- Easy to install
- Flexibility
- Cost efficient
- Non slip material
- Allows even spread of heat
- Disruption & hassle free

Installation Instructions

Pre Grooved Insulation Panels:-

The overlay panels are positioned on the upper surface. Aluminium heat diffusion plates are located in the pre-formed grooves and the pipes are pressed into place. Pressing the pipework into the diffusion plates is sufficient to retain the pipes.

The floor finish, tongue & grooved chipboard or wood strip flooring can then be laid over the panels. A small gap is left around the perimeter of the room.

Technical Specification

Overlay panels are lightweight and space saving, eliminating the need for floor screed.

JCW Underfloor Heating have various sizes of overlay panels available

Material Features

The upper surface has an aluminium foil bonded to the overlay panels.
