

Pipe Bend Formers

UNDER FLOOR HEATING

The Product

Pipe Bend Formers, also called Pipe Guiding Elbows allow heating pipes to be bent in a 90 degree bow without forming kinks which impede flow within the pipe.

Product Specification

The JCW Pipe Bend Former is used to successfully guide pipes through floors, ceilings and into manifold cabinets whilst avoiding kinking. It is mainly used to connect underfloor heating pipe to a wall mounted manifold.

Advantages

- The JCW Pipe Bend Former allows installers to lead the pipe in the correct direction whilst avoiding pipe blockage problems
- Prevents excessive bending of underfloor heating pipes
- The JCW Pipe Bend Former is designed to strongly grip the underfloor heating pipe and prevent it from falling out during both the install process and normal system operation
- Manufactured from high quality materials

Technical Data

Tube size (mm)	Quantity per box	Width (mm)	Height (mm)	Length (mm)
14-18	100	25	125	130
20-22	50	30	140	145
